

intro

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

- layered design of networks

- implementing secure communication

make

```
$ ./foo.exe
...
...
$ edit readline.c
$ make
clang -g -O -Wall -c readline.c -o readline.o
ar rcs libreadline.a terminal.o readline.o
clang -o foo.exe foo.o foo-utility.o -L. -lreadline
$
```

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

- layered design of networks

- implementing secure communication

address translation

address translation

address translation

address translation

program addresses are 'virtual'
real addresses are 'physical'
can be *different sizes*!

address translation

address spaces

illusion of *dedicated memory*

address spaces

illusion of *dedicated memory*

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

multiple cores+threads

multiple cores+threads

multiple cores? each core still divided up

multiple cores+threads

multiple cores? each core still divided up

one program with multiple threads

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

- layered design of networks

- implementing secure communication

permissions

```
$ ls /u/other/secret
```

```
ls: cannot open directory '/u/other/secret': Permission denied
```

```
$ shutdown
```

```
shutdown: Permission denied
```

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

- layered design of networks

- implementing secure communication

networking layers

application	HTTP, SSH, SMTP, ...	application-defined meanings
transport	TCP, UDP, ...	reach correct program reliability/streams
network	IPv4, IPv6	reach correct machine (across networks)
link	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

networking layers

application	HTTP, SSH, SMTP, ...	application-defined meanings
transport	TCP, UDP, ...	reach correct program <i>reliability/streams</i>
network	IPv4, IPv6	reach correct machine (across networks)
link	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

networking layers

application	HTTP, SSH, SMTP, ...	application-defined meanings
transport	TCP, UDP, ...	reach correct program reliability/streams
network	IPv4, IPv6	reach correct machine (across networks)
<i>link</i>	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

networking layers

application	HTTP, SSH, SMTP, ...	application-defined meanings
transport	TCP, UDP, ...	reach correct program reliability/streams
<i>network</i>	IPv4, IPv6	reach correct machine (across networks)
link	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

networking layers

application	HTTP, SSH, SMTP, ...	application-defined meanings
<i>transport</i>	TCP, UDP, ...	reach correct program reliability/streams
network	IPv4, IPv6	reach correct machine (across networks)
link	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

networking layers

<i>application</i>	HTTP, SSH, SMTP, ...	application-defined meanings

link	Ethernet, Wi-Fi, ...	coordinate shared wire/radio
physical	Ethernet, Wi-Fi, ...	encode bits for wire/radio

layers terminology

application	application-defined meanings	
transport	reach correct program, reliability/streams	segments/datagrams
network	reach correct machine (across networks)	packets
link	coordinate shared wire/radio	frames
physical	encode bits for wire/radio	

names and addresses

name

logical identifier

address

location/how to locate

variable counter

memory address 0x7FFF9430

DNS name `www.virginia.edu`

IPv4 address `128.143.22.36`

DNS name `mail.google.com`

IPv4 address `216.58.217.69`

DNS name `mail.google.com`

IPv6 address `2607:f8b0:4004:80b::2005`

DNS name `cso2.cs.virginia.edu`

IPv4 address `128.143.67.91`

DNS name `cso2.cs.virginia.edu`

MAC address `18:66:da:2e:7f:da`

service name `https`

port number `443`

service name `ssh`

port number `22`

secure communication?

how do you know who your socket is to?

who can read what's on the socket?

what can you do to restrict this?

themes

automating building software

- libraries, taking advantage of incremental compilation

sharing machines

- multiple users/programs on one system

parallelism and concurrency

- doing two+ things at once

communicating between machines

- layered design of networks

- implementing secure communication

some performance examples

some performance examples

```
example1:
    movq $1000000000000, %rax
loop1:
    addq %rbx, %rcx
    decq %rax
    jge loop1
    ret
```

about 30B instructions

my desktop: approx 2.65 sec

```
example2:
    movq $1000000000000, %rax
loop2:
    addq %rbx, %rcx
    addq %r8, %r9
    decq %rax
    jge loop2
    ret
```

about 40B instructions

my desktop: approx 2.65 sec

some performance examples

```
example1:  
    movq $1000000000000, %rax  
loop1:  
    addq %rbx, %rcx  
    decq %rax  
    jge loop1  
    ret
```

about 30B instructions

my desktop: approx *2.65 sec*

```
example2:  
    movq $1000000000000, %rax  
loop2:  
    addq %rbx, %rcx  
    addq %r8, %r9  
    decq %rax  
    jge loop2  
    ret
```

about 40B instructions

C exercise

```
int array[4] = {10,20,30,40};  
int *p;  
p = &array[0];  
p += 2;  
p[1] += 1;
```

array =

- | | |
|-----------------------------|------------------|
| A. compile or runtime error | B. {10,20,30,41} |
| C. {10,20,32,41} | D. {10,21,30,40} |
| E. {12,21,30,40} | F. none of these |

C exercise (2)

```
int *array2[4]; int array1[4] = {10,20,30,40};
void mystery(int **p) {
    *p = &array1[2];
}
int main() {
    int **q;
    q = array2;
    mystery(q);
    array1[1] = *q;
    ...
}
```

array1 =

- | | |
|-----------------------------|------------------|
| A. compile or runtime error | B. {10,10,30,40} |
| C. {10,30,30,40} | D. {10,10,20,30} |
| E. {10,20,10,20} | F. none of these |

C exercise (2)

```
int *array2[4]; int array1[4] = {10,20,30,40};
void mystery(int **p) {
    *p = &array1[2];
}
int main() {
    int **q;
    q = array2;
    mystery(q);
    array1[1] = *q;
    ...
}
```

array1 =

- | | |
|-----------------------------|------------------|
| A. compile or runtime error | B. {10,10,30,40} |
| C. {10,30,30,40} | D. {10,10,20,30} |
| E. {10,20,10,20} | F. none of these |

some avenues for review

review CSO1 stuff

labs 10–13, homeworks 7–8 of last Spring

`\url{https://researcher111.github.io/uva-cso1-F23-DG/}`

exercises we've used in the past:

implement strsep library function

implement conversion from dynamic array to linked list

some pointer stuff

some pointer stuff

0x040

0x038

0x030

0x028

0x020

0x018

0x010

0x008

0x000

```
int single = 0x18;  
int *ptr;
```

some pointer stuff

0x040	
0x038	array[2]: 0x67
	array[1]: 0x45
0x030	array[0]: 0x12
	single: 0x78
0x028	ptr = ???
0x020	
0x018	
0x010	
0x008	
0x000	

```
int single = 0x78;  
int *ptr;
```

some pointer stuff

some pointer stuff

```
int single = 0x78;  
int *ptr;  
  
ptr = &single;  
ptr = (int*) 0x28;  addr. of single
```

some pointer stuff

0x040	
0x038	array[2]: 0x67
	array[1]: 0x45
0x030	array[0]: 0x12
	single: 0x78
